# Step-by-Step Roadmap to Build AI Agents

(From Beginner to Advanced)

Master agentic AI systems – even if you're  
starting from scratch.

**Swipe for more**

# Step 1 - Python Foundations

You don't need to be an expert. But you must know:

- Functions & Classes
- Control flow (if, for, while)
- API requests & responses
- Error handling & logging

**Why?**

Python is the language of AI agents.

***Solid foundation = fewer headaches later***

## Step 2 - Make LLM Calls using LangChain

Start talking to LLMs (like ChatGPT or Gemini) through LangChain:

- Send prompts
- Parse responses
- Chain steps

### Start Small:

-  “Summarize this document”
-  “Extract key points from a PDF”
-  “Create LinkedIn post”

## Step 3 - Build AI Agents in LangChain

Now you're building intelligent helpers.

- Add tools (calendar, email, browser)
- Give memory (so they don't forget)
- Let them choose tools based on goal

### **Example:**

“Book a meeting and send agenda” → AI picks the right tools in order.

***This is reasoning in action.***

# Step 4 - Add Knowledge Base

Teach your agents your context.

- Connect to internal docs
- Use vector DBs like Pinecone or FAISS
- Enable Retrieval-Augmented Generation (RAG)

 Agents now remember past emails, SOPs, customer history.

***Welcome to personalized agents.***

# Step 5 - Multi-Agent Systems with CrewAI

One agent is smart.

But a team of agents? Powerful.

→ Assign roles (researcher, writer, editor)

→ Let agents collaborate

## **Blog Creation use case:**

Research topic → Draft blog → Edit for clarity

***You're now an orchestrator.***

# Step 6 - Build Autonomous Agents

Use **AutoGen** or **LangGraph** frameworks to go deeper:

- Agents that retry, refine, collaborate
- Goal-driven flows with memory & branching

## Examples:

- Create & publish a blog post
- Book a hotel in Paris and schedule a flight

***These are autonomous systems, not scripts.***

# Step 7 - Apply in Real Life

Start small. Then scale.

- Summarize docs
- Draft daily emails
- Manage to-dos

**Then:**

- Create this..
- Book hotel..

***That's how you master agentic systems.***
